

NMIS

*Software to manage organizations & big companies
(general ledger, stock, salaries, contracts, purchases human resources)*

NMIS

represent seven integrated modules managerial and commercial point of view that needed by the government and the big companies.

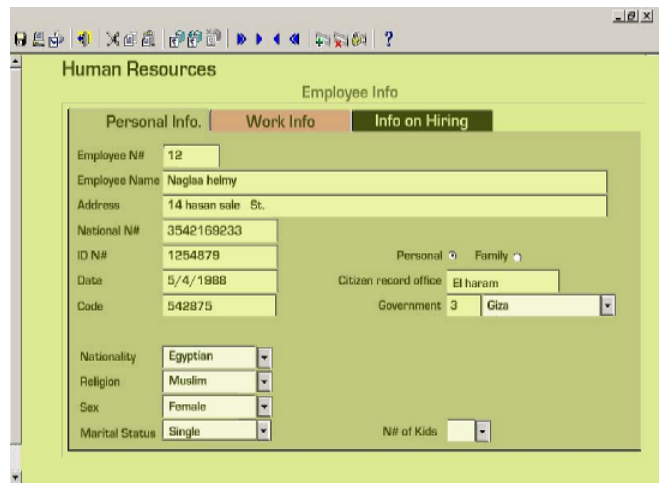

The software contain a special collection of reports that cover all the needs of the users.

NTG can make any modification or adding on the software or design any additional reports that match with the special needs of the client.

The main feature of the software:

1. The software works on data base Oracle.
2. All the module are integrated together and it can be used separately.
3. The software can be used easily with slenderness in entering the input.
4. A great flexibility in adding, modifying and identify the systems matching with the client needs.
5. An effective system to the general ledger arrives to seven analytical levels.
6. The data can be entered in bilingual way (Arabic, English).
7. A big collection of analytical reports and accumulated reports to every module.
8. The software works effectively on all kinds of networks.
9. A daily saving to all data to guarantee having stored data in case of damage in P. C.
10. A protection system multi level on all the systems each or the software as a whole

The modules in the software:

1. General ledger module
2. Salaries & human resources module
3. Stock & stock control module
4. Contracts & purchases module
5. Cost accounting module
6. Protection module
